

Tailgate hinge

The diagram shows a detailed view of a tailgate hinge assembly. A central metal plate is mounted on a tailgate, with a circular hole at the top. A long metal bar is attached to the side of this plate. At the bottom of the plate, a thick black rectangular bush is visible. A callout line points from the text 'Tailgate hinge' to the central plate. Another callout line points from a small black pin to the bush. The pin has a cylindrical body and a wider, flared base. Several other metal components, including a long horizontal bar and various curved brackets, are shown in the background, representing the rest of the hinge mechanism.
