

Timing belt
tensioner arm

This technical diagram illustrates the timing belt tensioner arm assembly. A dashed line outlines the tensioner arm, which is a long, thin component with a threaded section at one end. A solid line shows the arm being inserted into a circular housing. The housing has a central opening and is surrounded by various bolts and nuts. A large circular component, likely a pulley, is visible on the right side of the assembly. The diagram is a black and white line drawing, typical of a service manual.
