

No.1 ignition coil

The diagram shows a detailed view of an ignition coil pick-up loop assembly. A central component, the pick-up loop, is mounted on a base. It features a circular contact point and is surrounded by various electrical terminals and mounting hardware. Two thick, curved lines represent the pick-up loops themselves, which are positioned to make contact with the central contact. The entire assembly is supported by a base with several mounting points, including hexagonal nuts and bolts. The drawing is a black and white line art illustration.
