

Right bank
oxygen sensor (front)

The diagram shows a line drawing of the front right side of a vehicle. A line points from the text label to a sensor mounted on the engine's exhaust manifold. The sensor is a cylindrical component with a multi-pin electrical connector on top. The engine and various mechanical parts are visible in the background.

Right bank oxygen
sensor (front)
connector

This label points to the electrical connector of the oxygen sensor shown in the upper diagram. The connector is a square-shaped component with four circular terminals arranged in a 2x2 grid.

Equipment side
connector

This label points to the equipment side connector, which is a square-shaped component with four circular terminals arranged in a 2x2 grid, matching the connector shown in the upper diagram.
