

A technical line drawing showing a car's headlining being attached to a metal clip. A vinyl cord is used to secure the headlining to the clip. The drawing includes several labels with leader lines pointing to the components: 'Headlining' points to the fabric-like material on the left; 'Clip' points to a circular metal fastener at the top; and 'Vinyl cord' points to a thick, flexible cord that loops around the clip and extends downwards. The background shows faint outlines of the car's interior structure.
